

Project Design Phase
Solution Architecture

Date	1 5 july 2026
Team ID	
Project Name	Virtual Agent–Driven SLA Breach Awareness & Justification System
Maximum Marks	4 Marks

Solution Architecture:

- The **Virtual Agent–Driven SLA Breach Awareness & Justification System** is built on the ServiceNow platform to help teams manage SLA deadlines more efficiently. When an incident is created, the SLA Engine continuously tracks its progress. If the SLA reaches a warning level (such as 80% or 90%), Flow Designer automatically triggers the Virtual Agent and sends notifications to the assigned user.
- The Virtual Agent reminds the user about the approaching SLA deadline and collects a justification if the task cannot be completed on time. If necessary, the incident is automatically escalated to the manager. All updates are stored in the ServiceNow database and displayed in dashboards for monitoring and reporting.
- This architecture reduces manual effort, improves SLA compliance, and helps organizations deliver better and faster IT services.
