

Project Design Phase-II

Technology Stack (Architecture & Stack)

Date	14 July 2026
Team ID	
Project Name	SLA Governance & Accountability in ServiceNow
Maximum Marks	4 Marks

Technical Architecture

This solution is built on the ServiceNow platform to monitor, govern and enforce Service Level Agreements (SLAs). Business users interact through the Service Portal while administrators configure workflows, SLA policies and reports.

Architecture Diagram (Text Representation)

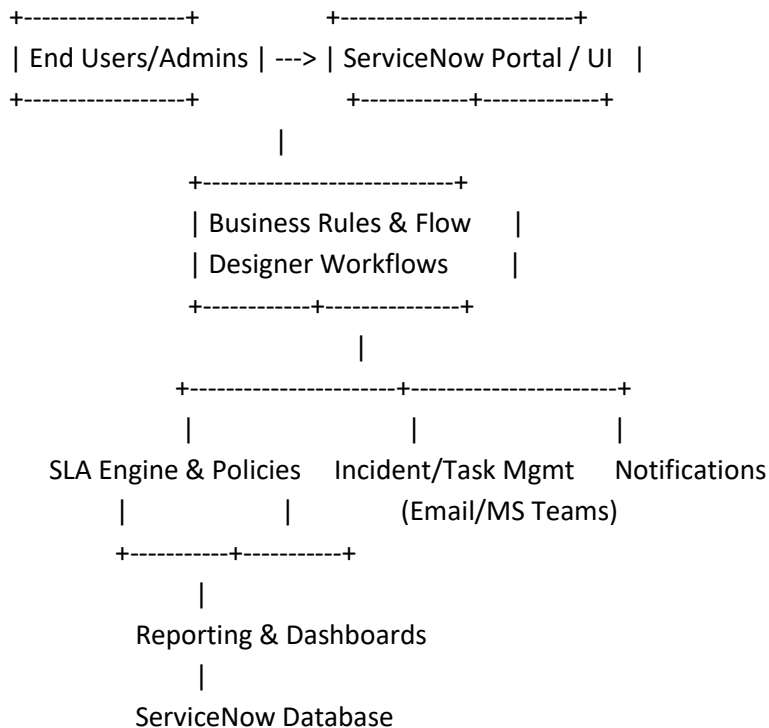

Table 1: Components & Technologies

S.No	Component	Description	Technology
1	User Interface	Service Portal, Workspace	HTML, CSS, JavaScript, ServiceNow UI Builder
2	Application Logic	Workflow automation	Flow Designer, Business Rules
3	SLA Management	SLA tracking and escalation	ServiceNow SLA Engine
4	Notifications	Alerts and reminders	Email Notifications, MS Teams
5	Database	Operational data	ServiceNow MySQL-based platform DB
6	Reporting	Dashboards & KPIs	Performance Analytics
7	External API	Integrations	REST API
8	Authentication	Identity & Access	SSO, OAuth 2.0
9	Infrastructure	Cloud deployment	ServiceNow Cloud

Table 2: Application Characteristics

S.No	Characteristic	Description	Technology
1	Open-source Frameworks	Client-side scripting support	JavaScript
2	Security	RBAC, encryption, audit logs	ACLs, TLS, OAuth 2.0
3	Scalable Architecture	Cloud-native multi-tenant platform	ServiceNow SaaS
4	Availability	High availability with redundancy	ServiceNow Cloud
5	Performance	Indexed queries, async workflows	Flow Designer, Performance Analytics

Key Modules Used

- Incident Management
- Task Management
- SLA Definitions
- Flow Designer
- Business Rules
- Performance Analytics
- Notification Engine
- REST Integrations
